

## Rubber profile

EPDM rubber profile for the clamp of the ventilation duct. The rubber seal helps reduce noise caused by vibration in the ventilation duct.

- EPDM rubber profile
- Suitable for clamps with a width of 25 mm
- 125 m per package
- Temperature tolerance -40 °C to +130 °C

EPDM rubber is a soft and elastic material with excellent dynamic and technical characteristics. The rubber profile helps prevent scratches caused by friction between metal parts and partially mitigates displacements caused by thermal expansion.
