Explanations

(U)	At least one phase-out substance has been used in the manufacturing phase.
U	Contains at least one phase-out substance. / The substance fulfills the criteria for a phase-out substance according to the Swedish Chemicals Authority tool for substitution, PRIO.
(R)	At least one prioritized risk reduction substance has been used in the manufacturing phase.
R	Contains at least one prioritized risk reduction substance. / The substance fulfills the criteria for a prioritized risk reducing substance according to the Swedish Chemicals Authority tool for substitution, PRIO.
(H1)	At least one substance on the European Commission Priority List with endocrine disruptors in category 1 has been used in the manufacturing stage for this product; this means that there is evidence of endocrine disrupting effects in at least one species (including humans).
H1	Contains at least one substance found on the European Commission Priority List with endocrine disruptors in category 1; this means that there is evidence of endocrine disrupting effects in at least one species (including humans).
(H2)	At least one substance on the European Commission Priority List with endocrine disruptors in category 2 has been used in the manufacturing stage for this product; this means that there is evidence of endocrine disrupting effects regarding the specific substance when doing "in vitro"-experiments (test tube experiments).
H2	Contains at least one substance found on the European Commission Priority List with endocrine disruptors in category 2; this means that there is evidence of endocrine disrupting effects regarding the specific substance when doing "in vitro"-experiments (test tube experiments). / The substance is present in the European Comissions prioritization list over endocrine disruptors under category 2, which means that there is scientific evidence for an endocrine disrupting effect when performing in vitro experiments (test tube experiments).
(P1)	At least one PBT/vPvB substance has been used in the manufacturing phase.
P1	Contains at least one PBT/vPvB substance.
(P2)	At least one potential PBT/vPvB substance has been used in the manufacturing phase.
P2	Contains at least one potential PBT/vPvB substance. / The substance is potentially persistent, bioaccumulative (a substance that gathers in living animals) and toxic alternatively potentially very persistent and very bioaccumulative.
	Substances hazardous to health present in the product during the manufacturing phase.
§	The substance is present in the restriction database.
n	Does not contain nano particles
	Contains at least one environmentally hostile substance.
	At least one environmentally hazardous substance used at construction
"Worst Case" substance	Worstcase substances are those that past experience or literature has shown may be present in particular product types. Worstcase substances are used when specific information on the product content is missing, in order to ensure that no critical elements are left out in the assessment.
(substance name)	A substance name in parentheses indicates that the substance is only present during the manufacturing stage, not in the finished product.
H220	Extremely flammable gas.
H225	Highly flammable liquid and vapour.
H228	Flammable solid.
H301	Toxic if swallowed.
H302	Harmful if swallowed.

Explanations	
H315	Causes skin irritation.
H317	May cause an allergic skin reaction.
H318	Causes serious eye damage.
H319	Causes serious eye irritation.
H330	Fatal if inhaled.
H331	Toxic if inhaled.
H332	Harmful if inhaled.
H334	May cause allergy or asthma symptoms or breathing difficulties if inhaled.
H335	May cause respiratory irritation.
H340	May cause genetic defects.
H350	May cause cancer.
H351	Suspected of causing cancer.
H360D	May damage the unborn child
H360F	May damage fertility
H372	Causes damage to organs through prolonged or repeated exposure.
H400	Very toxic to aquatic life.
H410	Very toxic to aquatic life with long lasting effects.
H412	Harmful to aquatic life with long lasting effects.
